PROJECTS

AI - Based Crop Recommendation System | [Link](#) Sep' 25 – Nov' 25

- Developed a full-stack machine learning web application using Flask framework to recommend optimal crops based on soil nutrients (N, P, K) and environmental factors (temperature, humidity, pH, rainfall)
- Trained and evaluated multiple ML models (Logistic Regression, Naive Bayes, SVM, KNN, Decision Tree, Random Forest) using Scikit-Learn, achieving 99% accuracy with Random Forest
- Developed a responsive Flask-based web application for real-time crop prediction with an intuitive user interface
- Tech Stack:** *Python, Machine Learning, Scikit-Learn, Numpy, Pandas, Matplotlib, Flask*

Deep Learning – Based Sentiment Classifier for IMDb Reviews | [Link](#) Aug' 25 – Nov 25

- Developed a deep learning based NLP system to classify IMDb movie reviews into positive or negative sentiments using a dataset of 50,000 labeled reviews
- Implemented and compared multiple neural architectures including RNN, LSTM, GRU, and BiLSTM to evaluate performance on sentiment classification
- Built and deployed a Flask-based web application enabling real-time review sentiment prediction
- Tech Stack:** *Python, Deep Learning Techniques, TensorFlow, Keras, Flask*
